Revision History

PUBLISH DATE	UPDATES
November 2007	Initial release of the Customer Information Manager (CIM) API
May 2008	Remove SecureSource requirements and various updates
January 2009	Addition of <code>getCustomerProfileIdsRequest</code> and various updates
July 2009	Clarified usage of <code>validationMode</code> for <code>createCustomerProfileRequest</code> calls when no payment profile information is included. Added index. Added note about optional fields and .NET programming Corrected values for <code>taxable</code> variable.
September 2009	Add note describing credit card authorizations for Visa
April 2010	Clarified duplicate profile verification Updated table of error codes Updated <code>createCustomerProfileTransactionRequest</code> for Refund transactions
June 2010	Changes required for Partial Authorization processing
July 2010	Correct code examples

Section 1

Developer Introduction

This guide describes the Web development required to create and manage customer profile information for the purpose of submitting transactions to the Authorize.Net Payment Gateway directly from a Web site or other application using extensible markup language (XML).

Specifically, the Authorize.Net Customer Information Manager (CIM) Application Programming Interface (API) provides a mechanism for developers and value added resellers (VARs) to create, delete, get, and update customer profile information, including payment and address information, via direct integration between client software or applications and the Authorize.Net Payment Gateway.

The CIM API accomplishes these functions through an XML call and subsequent XML response.

Minimum Requirements

Before you begin this integration for an Authorize.Net Payment Gateway account, please check with the merchant to make sure that the following minimum requirements have already been met.

- The merchant must have a U.S.- based merchant bank account that allows Internet transactions.
- The merchant must have an active Authorize.Net Card Not Present Payment Gateway account.
- The merchant must be signed up for the CIM service.
- The merchant must store account authentication data securely (for example, API login ID, transaction key).

Note: Merchants should avoid storing any type of sensitive cardholder information. However, in the event that a merchant or third party must store sensitive customer business or payment information, compliance with industry standard storage requirements is required. Please see the *Developer Security Best Practices White Paper* at <http://www.authorize.net/files/developerbestpractices.pdf> for guidelines.

Developer Support

There are several resources available to help you successfully integrate a merchant Web site or other application to the Authorize.Net Payment Gateway.

- The Integration Center at <http://developer.authorize.net> provides test accounts, sample code, FAQs, and troubleshooting tools.
- If you can't find what you need in the Integration Center, our Integration Team is available to answer your questions via e-mail at integration@authorize.net.
- Be sure to read our *Developer Security Best Practices White Paper* at <http://www.authorize.net/files/developerbestpractices.pdf> for information on how to maximize the security and reliability of your merchant integration solutions.

If you have any suggestions about how we can improve or correct this guide, please e-mail documentation@authorize.net.

Section 2

Executing an API Call

The following sections describe the minimum requirements for executing an API call for managing customer profiles using XML.

There are two options for developing the request script:

- You can develop a custom script yourself using the API fields information provided in this document, OR
- You can use Authorize.Net sample code in C# and Java available for free from our Integration Center at <http://developer.authorize.net/samplecode>.

Note: If you choose to use Authorize.Net sample code, please be aware that in order to achieve a successful implementation it **must** be modified with developer test account or the merchant's specific payment gateway account information.

Web Service Locations

ITEM	LOCATION
Production	https://api.authorize.net/xml/v1/request.api
Developer Test	https://apitest.authorize.net/xml/v1/request.api
XML Schema	https://api.authorize.net/xml/v1/schema/AnetApiSchema.xsd

In order to be processed successfully, API requests and responses must conform to the CIM API XML schema.

Note: The Developer Test URL requires the use of a developer test payment gateway account. You can request a test account from our Integration Center at <http://developer.authorize.net/testaccount>. Developer test accounts cannot be used to test against the Production URL.

Note for .NET programmers: When a parameter is optional, and if you use serialization, then the .NET language you are using automatically creates Boolean properties that indicate whether or not non-nullable parameters are specified. For example, if there is a parameter named `validationMode` that is an Enumeration type, a parameter called `validationModeSpecified` will automatically be created. By default, these properties are set to "false." If a request passes a value for an optional parameter, be sure to set these properties to "true" so that the value is not ignored.

CIM Functions

The CIM API includes the following functions:

- **createCustomerProfileRequest** – Create a new customer profile along with any customer payment profiles and customer shipping addresses for the customer profile.
- **createCustomerPaymentProfileRequest** – Create a new customer payment profile for an existing customer profile. You can create up to 10 payment profiles for each customer profile.
- **createCustomerShippingAddressRequest** – Create a new customer shipping address for an existing customer profile. You can create up to 100 customer shipping addresses for each customer profile.
- **createCustomerProfileTransactionRequest** – Create a new payment transaction from an existing customer profile.
- **deleteCustomerProfileRequest** – Delete an existing customer profile along with all associated customer payment profiles and customer shipping addresses.
- **deleteCustomerPaymentProfileRequest** – Delete a customer payment profile from an existing customer profile.
- **deleteCustomerShippingAddressRequest** – Delete a customer shipping address from an existing customer profile.
- **getCustomerProfileIdsRequest** – Retrieve all customer profile IDs you have previously created.
- **getCustomerProfileRequest** – Retrieve an existing customer profile along with all the associated customer payment profiles and customer shipping addresses.
- **getCustomerPaymentProfileRequest** – Retrieve a customer payment profile for an existing customer profile.
- **getCustomerShippingAddressRequest** – Retrieve a customer shipping address for an existing customer profile.
- **updateCustomerProfileRequest** – Update an existing customer profile.
- **updateCustomerPaymentProfileRequest** – Update a customer payment profile for an existing customer profile.
- **updateCustomerShippingAddressRequest** – Update a shipping address for an existing customer profile.
- **updateSplitTenderGroupRequest** – Update the status of a split tender group (a group of transactions, each of which pays for part of one order).
- **validateCustomerPaymentProfileRequest** – Verify an existing customer payment profile by generating a test transaction.

The following sections provide information about the input elements required for executing the functions listed above. Indentations in the Element column indicate grouping hierarchy. All elements are case sensitive and must be submitted in the order listed here. Elements are required unless otherwise indicated. Optional elements should not be submitted unless they contain valid values.

Note: Elements required for individual API calls are in addition to the authentication elements required for all API calls.

Authentication

ALL calls to the API require merchant authentication to ensure they originate from authorized sources. This implementation of the merchant Web services API supports authentication using the API Login ID and Transaction Key.

ELEMENT	VALUE	FORMAT	NOTES
merchantAuthentication	Contains merchant unique information for purposes of authentication		
name	The valid API Login ID for the developer test or merchant account	Up to 25 characters	Submit the API Login ID used to submit transactions
transactionKey	The valid Transaction Key for the developer test or merchant account	16 characters	Submit the Transaction Key obtained from the Merchant Interface

Example of Authentication with the Login ID and Transaction Key

```
<?xml version="1.0" encoding="utf-8"?>
<createCustomerProfileRequest xmlns=
"AnetApi/xml/v1/schema/AnetApiSchema.xsd">
  <merchantAuthentication>
    <name>mytestacct</name>
    <transactionKey>112223344</transactionKey>
  </merchantAuthentication>
</createCustomerProfileRequest>
```

Note: The sample code included in this document uses dummy field values. When using or testing sample code, be sure to enter valid field values. Additional sample code is available for download from the Authorize.Net Integration Center at <http://developer.authorize.net/samplecode>.

Input Elements for createCustomerProfileRequest

This function is used to create a new customer profile along with any customer payment profiles and customer shipping addresses for the customer profile.

The following table lists the input elements for executing an API call to the createCustomerProfileRequest function.

ELEMENT	VALUE	FORMAT	NOTES
refId	Merchant-assigned reference ID for the request Optional	Up to 20 characters	If included in the request, this value will be included in the response. This feature might be especially useful for multi-

ELEMENT	VALUE	FORMAT	NOTES
			threaded applications.
profile	Contains information for the customer profile		At least one of the following fields must be submitted under profile: merchantCustomerId, description or email.
merchantCustomerId	Merchant assigned ID for the customer Conditional	Up to 20 characters	Required only if no values for both description and email are submitted.
description	Description of the customer or customer profile Conditional	Up to 255 characters	Required only if no values for both merchantCustomerId and email are submitted.
email	Email address associated with the customer profile Conditional	Up to 255 characters	Required only if no values for both description and merchantCustomerId are submitted.
paymentProfiles	Contains payment profiles for the customer profile Optional		Multiple instances of this element may be submitted to create multiple payment profiles for the customer profile.
customerType	Optional	individual business	
billTo			
firstName	The customer's first name Optional	Up to 50 characters (no symbols)	
lastName	The customer's last name Optional	Up to 50 characters (no symbols)	
company	The name of the company associated with the customer, if applicable	Up to 50 characters (no symbols)	

ELEMENT	VALUE	FORMAT	NOTES
	Optional		
address	The customer's address Optional	Up to 60 characters (no symbols)	
city	The city of the customer's address Optional	Up to 40 characters (no symbols)	
state	The state of the customer's address Optional	A valid two-character state code	
zip	The ZIP code of the customer's address Optional	Up to 20 characters (no symbols)	
country	The country of the customer's address Optional	Up to 60 characters (no symbols)	
phoneNumber	The phone number associated with the customer profile Optional	Up to 25 digits (no letters) Ex. (123)123-1234	
faxNumber	The fax number associated with the customer profile Optional	Up to 25 digits (no letters) Ex. (123)123-1234	
payment	Contains payment profile information for the customer profile		Can contain creditCard or bankAccount
creditCard	Contains credit card payment information for the payment profile		This element is only required when the payment profile is credit card.

ELEMENT	VALUE	FORMAT	NOTES
cardNumber	The customer's credit card number	13 to 16 digits	
expirationDate	The expiration date for the customer's credit card	YYYY-MM	
cardCode	The three- or four-digit number on the back of a credit card (on the front for American Express) Optional	Numeric	This field is required if the merchant would like to use the Card Code Verification (CCV) security feature. For more information, please see the <i>Merchant Integration Guide</i> at http://www.authorize.net/support/merchant/ . cardCode is only used for validation and will not be stored in the customer profile. It should only be used when submitting validationMode with a value of testMode or liveMode.
bankAccount	Contains bank account payment information for the payment profile		This element is only required when the payment profile is bank account.
accountType	The type of bank account for the payment profile Optional	checking savings businessChecking	
routingNumber	The routing number of the customer's bank	9 digits	
accountNumber	The customer's bank account number	5 to 17 digits	
nameOnAccount	The customer's full name as	Up to 22 characters	

Last revised: 7/15/2010

ELEMENT	VALUE	FORMAT	NOTES
	listed on the bank account		
echeckType	The type of electronic check transaction Optional	CCD PPD TEL WEB	Currently, the CIM API does not support ARC or BOC transaction types.
bankName	The name of the bank associated with the bank account number Optional	Up to 50 characters	
shipToList	Contains shipping address information for the customer profile		
firstName	The customer's first name Optional	Up to 50 characters (no symbols)	
lastName	The customer's last name Optional	Up to 50 characters (no symbols)	
company	The name of the company associated with the customer, if applicable Optional	Up to 50 characters (no symbols)	
address	The customer's shipping address Optional	Up to 60 characters (no symbols)	
city	The city of the customer's shipping address Optional	Up to 40 characters (no symbols)	
state	The state of the customer's shipping	A valid two-character state code	

Last revised: 7/15/2010

ELEMENT	VALUE	FORMAT	NOTES
	address Optional		
zip	The ZIP code of the customer's shipping address Optional	Up to 20 characters (no symbols)	
country	The country of the customer's shipping address Optional	Up to 60 characters (no symbols)	
phoneNumber	The phone number associated with the customer profile Optional	Up to 25 digits (no letters) Ex. (123)123-1234	
faxNumber	The fax number associated with the customer profile Optional	Up to 25 digits (no letters) Ex. (123)123-1234	
validationMode	Indicates the processing mode for the request Optional	none testMode liveMode oldLiveMode	<p>Validation mode allows you to generate a test transaction at the time you create a customer profile. In Test Mode, only field validation is performed. In Live Mode, a transaction is generated and submitted to the processor with the amount of \$0.00 or \$0.01. If successful, the transaction is immediately voided.</p> <p>Visa transactions are being switched from \$0.01 to \$0.00 for all processors. All other credit card types use \$0.01. We recommend you consult your Merchant Account Provider before switching to Zero</p>

ELEMENT	VALUE	FORMAT	NOTES
			<p>Dollar Authorizations for Visa, because you may be subject to fees</p> <p>For Visa transactions using \$0.00, the billTo address and billTo zip fields are required.</p> <p>We recommend that you do NOT use oldLiveMode. In oldLiveMode, \$0.01 is used for all credit card types, including Visa. The oldLiveMode option will be removed at a later date.</p> <p>When a value of "none" is submitted, no additional validation is performed. If a request does not include any payment profile information, the validation mode must be set to "none."</p> <p>If a validation transaction is unsuccessful, the profile will not be created and the merchant will receive an error.</p>

For information about output for this function, see the section of this document titled "[Output Elements for createCustomerProfileResponse.](#)"

Example createCustomerProfileRequest

```
<?xml version="1.0" encoding="utf-8"?>
<createCustomerProfileRequest
xmlns="AnetApi/xml/v1/schema/AnetApiSchema.xsd">
  <merchantAuthentication>
    <name>API Login ID here</name>
    <transactionKey>Transaction Key here</transactionKey>
  </merchantAuthentication>
  <profile>
    <merchantCustomerId>Merchant Customer ID
      here</merchantCustomerId>
    <description>Profile description here</description>
```

```

<email>customer profile email address here</email>
<paymentProfiles>
  <customerType>individual</customerType>
  <payment>
    <creditCard>
      <cardNumber>Credit card number here</cardNumber>
      <expirationDate>Credit card expiration date
        here</expirationDate>
    </creditCard>
  </payment>
</paymentProfiles>
</profile>
<validationMode>liveMode</validationMode>
</createCustomerProfileRequest>

```

Note: The sample code included in this document uses dummy field values. When using or testing sample code, be sure to enter valid field values. Additional sample code is available for download from the Authorize.Net Integration Center at <http://developer.authorize.net/samplecode>.

Input Elements for createCustomerPaymentProfileRequest

This function is used to create a new customer payment profile for an existing customer profile.

The following table lists the input elements for executing an API call to the createCustomerPaymentProfileRequest function.

ELEMENT	VALUE	FORMAT	NOTES
refId	Merchant-assigned reference ID for the request Optional	Up to 20 characters	If included in the request, this value will be included in the response. This feature might be especially useful for multi-threaded applications.
customerProfileId	Payment gateway assigned ID associated with the customer profile	Numeric	
paymentProfile	Contains payment information for the customer profile		
customerType	Optional	individual	

Last revised: 7/15/2010

ELEMENT	VALUE	FORMAT	NOTES
		business	
billTo			
firstName	The customer's first name Optional	Up to 50 characters (no symbols)	
lastName	The customer's last name Optional	Up to 50 characters (no symbols)	
company	The name of the company associated with the customer, if applicable Optional	Up to 50 characters (no symbols)	
address	The customer's address Optional	Up to 60 characters (no symbols)	
city	The city of the customer's address Optional	Up to 40 characters (no symbols)	
state	The state of the customer's address Optional	A valid two-character state code	
zip	The ZIP code of the customer's address Optional	Up to 20 characters (no symbols)	
country	The country of the customer's address Optional	Up to 60 characters (no symbols)	
phoneNumber	The phone number associated with the customer's address Optional	Up to 25 digits (no letters) Ex. (123)123-1234	
faxNumber	The fax number associated with the customer's address Optional	Up to 25 digits (no letters) Ex. (123)123-1234	

ELEMENT	VALUE	FORMAT	NOTES
payment	Contains payment information for the customer profile		Can contain creditCard or bankAccount
creditCard	Contains credit card payment information for the customer profile		This element is only required when the payment profile is credit card.
cardNumber	The customer's credit card number	13 to 16 digits	
expirationDate	The expiration date for the customer's credit card	YYYY-MM	
cardCode	The three- or four-digit number on the back of a credit card (on the front for American Express) Optional	Numeric	This field is required if the merchant would like to use the Card Code Verification (CCV) security feature. For more information, please see the <i>Merchant Integration Guide</i> at http://www.authorize.net/support/merchant/ . cardCode is only used for validation and will not be stored in the customer profile. It should only be used when submitting validationMode with a value of testMode or liveMode.
bankAccount	Contains bank account payment information for the customer profile		This element is only required when the payment profile is bank account.

Example createCustomerPaymentProfileRequest

```
<?xml version="1.0" encoding="utf-8"?>
<createCustomerPaymentProfileRequest
xmlns="AnetApi/xml/v1/schema/AnetApiSchema.xsd">
  <merchantAuthentication>
    <name>YourUserLogin</name>
    <transactionKey>YourTranKey</transactionKey>
  </merchantAuthentication>
  <customerProfileId>10000</customerProfileId>
  <paymentProfile>
    <billTo>
      <firstName>John</firstName>
      <lastName>Doe</lastName>
      <company></company>
      <address>123 Main St.</address>
      <city>Bellevue</city>
      <state>WA</state>
      <zip>98004</zip>
      <country>USA</country>
      <phoneNumber>000-000-0000</phoneNumber>
      <faxNumber></faxNumber>
    </billTo>
    <payment>
      <creditCard>
        <cardNumber>4111111111111111</cardNumber>
        <expirationDate>2023-12</expirationDate>
      </creditCard>
    </payment>
  </paymentProfile>
</createCustomerPaymentProfileRequest>
```

```

    </payment>
  </paymentProfile>
  <validationMode>liveMode</validationMode>
</createCustomerPaymentProfileRequest>

```

Note: The sample code included in this document uses dummy field values. When using or testing sample code, be sure to enter valid field values. Additional sample code is available for download from the Authorize.Net Integration Center at <http://developer.authorize.net/samplecode>.

Input Elements for createCustomerShippingAddressRequest

This function is used to create a new customer shipping address for an existing customer profile.

The following table lists the input elements for executing an API call to the createCustomerShippingAddressRequest function.

ELEMENT	VALUE	FORMAT	NOTES
refId	Merchant-assigned reference ID for the request Optional	Up to 20 characters	If included in the request, this value will be included in the response. This feature might be especially useful for multi-threaded applications.
customerProfileId	Payment gateway assigned ID associated with the customer profile	Numeric	
address	Contains shipping address information for the customer profile		
firstName	The customer's first name Optional	Up to 50 characters (no symbols)	
lastName	The customer's last name Optional	Up to 50 characters (no symbols)	
company	The name of the company associated with the customer, if applicable Optional	Up to 50 characters (no symbols)	
address	The customer's shipping address Optional	Up to 60 characters (no symbols)	

ELEMENT	VALUE	FORMAT	NOTES
city	The city of the customer's shipping address Optional	Up to 40 characters (no symbols)	
state	The state of the customer's shipping address Optional	A valid two-character state code	
zip	The ZIP code of the customer's shipping address Optional	Up to 20 characters (no symbols)	
country	The country of the customer's shipping address Optional	Up to 60 characters (no symbols)	
phoneNumber	The phone number associated with the customer's shipping address Optional	Up to 25 digits (no letters) Ex. (123)123-1234	
faxNumber	The fax number associated with the customer's shipping address Optional	Up to 25 digits (no letters) Ex. (123)123-1234	

For information about output elements for this function, see the section of this document titled [“Output Elements for createCustomerShippingAddressResponse.”](#)

Example createCustomerShippingAddressRequest

```
<?xml version="1.0" encoding="utf-8"?>
<createCustomerShippingAddressRequest
xmlns="AnetApi/xml/v1/schema/AnetApiSchema.xsd">
  <merchantAuthentication>
    <name>YourUserLogin</name>
    <transactionKey>YourTranKey</transactionKey>
  </merchantAuthentication>
  <customerProfileId>10000</customerProfileId>
  <address>
```

```

    <firstName>John</firstName>
    <lastName>Doe</lastName>
    <company></company>
    <address>123 Main St.</address>
    <city>Bellevue</city>
    <state>WA</state>
    <zip>98004</zip>
    <country>USA</country>
    <phoneNumber>000-000-0000</phoneNumber>
    <faxNumber></faxNumber>
  </address>
</createCustomerShippingAddressRequest>

```

Note: The sample code included in this document uses dummy field values. When using or testing sample code, be sure to enter valid field values. Additional sample code is available for download from the Authorize.Net Integration Center at <http://developer.authorize.net/samplecode>.

Input Elements for createCustomerProfileTransactionRequest

This function is used to create a payment transaction from an existing customer profile. You can submit one of six transaction types: Authorization Only, Authorization and Capture, Capture Only, Prior Authorization and Capture, Refund and Void. For more information on these transaction types, please see the *Merchant Integration Guide* at <http://www.authorize.net/support/merchant/>.

Note: The only transaction types that generate a customer receipt email are Authorization Only, Authorization and Capture, and Refund.

For Authorization Only Transactions

The following table lists the input elements for executing an API call to the createCustomerProfileTransactionRequest function for an Authorization Only transaction.

ELEMENT	VALUE	FORMAT	NOTES
refId	Merchant-assigned reference ID for the request Optional	Up to 20 characters	If included in the request, this value will be included in the response. This feature might be especially useful for multi-threaded applications.
transaction	Contains transaction information		

ELEMENT	VALUE	FORMAT	NOTES
profileTransAuthOnly	The transaction type that is being requested		Only one transaction type is allowed per request.
amount	The total amount of the transaction	Up to 4 digits after the decimal point (no dollar symbol) Ex. 12.99 or 12.9999	This amount should include all other amounts such as tax amount, shipping amount, etc.
tax	Contains tax information for the transaction Optional		
amount	The tax amount for the transaction Optional	Up to 4 digits after the decimal point (no dollar symbol) Ex. 12.99 or 12.9999	This amount must be included in the total amount for the transaction.
name	The name of the tax for the transaction Optional	Up to 31 characters	
description	The tax description for the transaction Optional	Up to 255 characters	
shipping	Contains shipping information for the transaction Optional		
amount	The shipping amount for the transaction Optional	Up to 4 digits after the decimal point (no dollar symbol) Ex. 12.99 or 12.9999	This amount must be included in the total amount for the transaction.
name	The name of the shipping for the transaction Optional	Up to 31 characters	
description	The shipping description for	Up to 255 characters	

Last revised: 7/15/2010

ELEMENT	VALUE	FORMAT	NOTES
	the transaction Optional		
duty	Contains duty information for the transaction Optional		
amount	The duty amount for the transaction Optional	Up to 4 digits after the decimal point (no dollar symbol) Ex. 12.99 or 12.9999	This amount must be included in the total amount for the transaction.
name	The name of the duty for the transaction Optional	Up to 31 characters	
description	The duty description for the transaction Optional	Up to 255 characters	
lineItems	Contains line item details about the order Optional		Up to 30 distinct instances of this element may be included per transaction to describe items included in the order.
itemId	The ID assigned to the item Optional	Up to 31 characters	
name	A short description of an item Optional	Up to 31 characters	
description	A detailed description of an item Optional	Up to 255 characters	
quantity	The quantity of an item Optional	Up to 4 digits (up to two decimal places)	

Last revised: 7/15/2010

ELEMENT	VALUE	FORMAT	NOTES
unitPrice	Cost of an item per unit <i>excluding</i> tax, freight, and duty Optional	Up to 4 digits with a decimal point (no dollar symbol) Ex. 4.95	
taxable	Indicates whether the item is subject to tax Optional	false true	
customerProfileId	Payment gateway assigned ID associated with the customer profile	Numeric	
customerPaymentProfileId	Payment gateway assigned ID associated with the customer payment profile	Numeric	
customerShippingAddressId	Payment gateway assigned ID associated with the customer shipping address Optional	Numeric	If customerShippingAddressId is not passed, shipping information will not be included with the transaction.
order	Contains information about the order Optional		
invoiceNumber	The merchant assigned invoice number for the transaction Optional	Up to 20 characters (no symbols)	
description	The transaction description Optional	Up to 255 characters (no symbols)	
purchaseOrderNumber	The merchant	Up to 25 characters (no

For Authorization and Capture Transactions

The following table lists the input elements for executing an API call to the createCustomerProfileTransactionRequest function for an Authorization and Capture transaction.

ELEMENT	VALUE	FORMAT	NOTES
refId	Merchant-assigned reference ID for the request Optional	Up to 20 characters	If included in the request, this value will be included in the response. This feature might be especially useful

Last revised: 7/15/2010

ELEMENT	VALUE	FORMAT	NOTES
			for multi-threaded applications.
transaction	Contains transaction information		
profileTransAuthCapture	The transaction type that is being requested		Only one transaction type is allowed per request.
amount	The total amount of the transaction	Up to 4 digits after the decimal point (no dollar symbol) Ex. 12.99 or 12.9999	This amount should include all other amounts such as tax amount, shipping amount, etc.
tax	Contains tax information for the transaction Optional		
amount	The tax amount for the transaction Optional	Up to 4 digits after the decimal point (no dollar symbol) Ex. 12.99 or 12.9999	This amount must be included in the total amount for the transaction.
name	The name of the tax for the transaction Optional	Up to 31 characters	
description	The tax description for the transaction Optional	Up to 255 characters	
shipping	Contains shipping information for the transaction Optional		
amount	The shipping amount for the transaction Optional	Up to 4 digits after the decimal point (no dollar symbol) Ex. 12.99 or 12.9999	This amount must be included in the total amount for the transaction.

Last revised: 7/15/2010

ELEMENT	VALUE	FORMAT	NOTES
name	The name of the shipping for the transaction Optional	Up to 31 characters	
description	The shipping description for the transaction Optional	Up to 255 characters	
duty	Contains duty information for the transaction Optional		
amount	The duty amount for the transaction Optional	Up to 4 digits after the decimal point (no dollar symbol) Ex. 12.99 or 12.9999	This amount must be included in the total amount for the transaction.
name	The name of the duty for the transaction Optional	Up to 31 characters	
description	The duty description for the transaction Optional	Up to 255 characters	
lineItems	Contains line item details about the order Optional		Up to 30 distinct instances of this element may be included per transaction to describe items included in the order.
itemId	The ID assigned to the item Optional	Up to 31 characters	
name	A short description of an item Optional	Up to 31 characters	
description	A detailed description of	Up to 255 characters	

Last revised: 7/15/2010

ELEMENT	VALUE	FORMAT	NOTES
	an item Optional		
quantity	The quantity of an item Optional	Up to 4 digits (up to two decimal places)	
unitPrice	Cost of an item per unit <i>excluding</i> tax, freight, and duty Optional	Up to 4 digits with a decimal point (no dollar symbol) Ex. 4.95	
taxable	Indicates whether the item is subject to tax Optional	false true	
customerProfileId	Payment gateway assigned ID associated with the customer profile	Numeric	
customerPaymentProfileId	Payment gateway assigned ID associated with the customer payment profile	Numeric	
customerShippingAddressId	Payment gateway assigned ID associated with the customer shipping address Optional	Numeric	If customerShippingAddressId is not passed, shipping information will not be included with the transaction.
order	Contains information about the order Optional		
invoiceNumber	The merchant assigned invoice number for the transaction	Up to 20 characters (no symbols)	

Last revised: 7/15/2010

ELEMENT	VALUE	FORMAT	NOTES
	Optional		
description	The transaction description Optional	Up to 255 characters (no symbols)	
purchaseOrderNumber	The merchant assigned purchase order number Optional	Up to 25 characters (no symbols)	
taxExempt	The tax exempt status Optional	TRUE FALSE	
recurringBilling	The recurring billing status Optional	TRUE FALSE	
cardCode	The customer's card code (the three- or four-digit number on the back or front of a credit card) Required only when the merchant would like to use the Card Code Verification (CCV) filter Conditional	3 to 4 digits	This field is required if the merchant would like to use the CCV security feature. For more information, please see the <i>Merchant Integration Guide</i> at http://www.authorize.net/support/merchant/ .
splitTenderId	Conditional	Up to 6 digits	This field is required for second and subsequent transactions related to a partial authorization transaction.
extraOptions	Information in name/value pair format that does not exist within CIM, such as	String (see example below)	For a complete list of the transaction variable names available, please review

ELEMENT	VALUE	FORMAT	NOTES
	customer IP address, etc. Optional		the <i>AIM Implementation Guide</i> located at http://www.authorize.net/suppor/aim_guide.pdf .

For Capture Only Transactions

The following table lists the input elements for executing an API call to the createCustomerProfileTransactionRequest function for a Capture Only transaction.

ELEMENT	VALUE	FORMAT	NOTES
refId	Merchant-assigned reference ID for the request Optional	Up to 20 characters	If included in the request, this value will be included in the response. This feature might be especially useful for multi-threaded applications.
transaction	Contains transaction information		
profileTransCaptureOnly	The transaction type that is being requested		Only one transaction type is allowed per request.
amount	The total amount of the transaction	Up to 4 digits after the decimal point (no dollar symbol) Ex. 12.99 or 12.9999	This amount should include all other amounts such as tax amount, shipping amount, etc.
tax	Contains tax information for the transaction Optional		
amount	The tax amount for the transaction Optional	Up to 4 digits after the decimal point (no dollar symbol) Ex. 12.99 or 12.9999	This amount must be included in the total amount for the transaction.
name	The name of the tax for the transaction Optional	Up to 31 characters	
description	The tax description for the transaction Optional	Up to 255 characters	

ELEMENT	VALUE	FORMAT	NOTES
shipping	Contains shipping information for the transaction Optional		
amount	The shipping amount for the transaction Optional	Up to 4 digits after the decimal point (no dollar symbol) Ex. 12.99 or 12.9999	This amount must be included in the total amount for the transaction.
name	The name of the shipping for the transaction Optional	Up to 31 characters	
description	The shipping description for the transaction Optional	Up to 255 characters	
duty	Contains duty information for the transaction Optional		
amount	The duty amount for the transaction Optional	Up to 4 digits after the decimal point (no dollar symbol) Ex. 12.99 or 12.9999	This amount must be included in the total amount for the transaction.
name	The name of the duty for the transaction Optional	Up to 31 characters	
description	The duty description for the transaction Optional	Up to 255 characters	
lineItems	Contains line item details about the order Optional		Up to 30 distinct instances of this element may be included per transaction to describe items included in the order.

ELEMENT	VALUE	FORMAT	NOTES
itemId	The ID assigned to the item Optional	Up to 31 characters	
name	A short description of an item Optional	Up to 31 characters	
description	A detailed description of an item Optional	Up to 255 characters	
quantity	The quantity of an item Optional	Up to 4 digits (up to two decimal places)	
unitPrice	Cost of an item per unit <i>excluding</i> tax, freight, and duty Optional	Up to 4 digits with a decimal point (no dollar symbol) Ex. 4.95	
taxable	Indicates whether the item is subject to tax Optional	false true	
customerProfileId	Payment gateway assigned ID associated with the customer profile	Numeric	
customerPaymentProfileId	Payment gateway assigned ID associated with the customer payment profile	Numeric	

ELEMENT	VALUE	FORMAT	NOTES
customerShippingAddressId	Payment gateway assigned ID associated with the customer shipping address Optional	Numeric	If customerShippingAddressId is not passed, shipping information will not be included with the transaction.
order	Contains information about the order Optional		
invoiceNumber	The merchant assigned invoice number for the transaction Optional	Up to 20 characters (no symbols)	
description	The transaction description Optional	Up to 255 characters (no symbols)	
purchaseOrderNumber	The merchant assigned purchase order number Optional	Up to 25 characters (no symbols)	
taxExempt	The tax exempt status Optional	TRUE FALSE	
recurringBilling	The recurring billing status Optional	TRUE FALSE	
cardCode	The customer's card code (the three- or four-digit number on the back or front of a credit card) Required only when the merchant would like to use the Card Code Verification	3 to 4 digits	This field is required if the merchant would like to use the CCV security feature. For Refund Transactions

- If you are submitting a refund against a previous CIM transaction, the following guidelines apply: include customerProfileId, customerPaymentProfileId, and transId.
- customerShippingAddressId is optional.
- creditCardNumberMasked, bankRoutingNumberMasked, and bankAccountNumberMasked do not need to be included, but will be validated if they are included.

If you are submitting a refund against a previous transaction that is not a CIM transaction, the following guidelines apply:

- you must include transId, creditCardNumberMasked (or bankRoutingNumberMasked and bankAccountNumberMasked).
- do not include customerProfileId, customerPaymentProfileId, and customerShippingAddressId.

Last revised: 7/15/2010

You can also issue an unlinked refund against a previous CIM transaction. In this case, the following rules apply:

- you must be enrolled in Expanded Credit Capabilities (ECC). For more information about ECC, see <http://www.authorize.net/files/ecc.pdf>.
- you must include `customerProfileId` and `customerPaymentProfileId`.
- `customerShippingAddressId` is optional.
- do not include `transId`, `creditCardNumberMasked`, `bankRoutingNumberMasked`, and `bankAccountNumberMasked`.

The following table lists the input elements for executing an API call to the `createCustomerProfileTransactionRequest` function for a Refund transaction.

ELEMENT	VALUE	FORMAT	NOTES
refId	Merchant-assigned reference ID for the request Optional	Up to 20 characters	If included in the request, this value will be included in the response. This feature might be especially useful for multi-threaded applications.
transaction	Contains transaction information		
profileTransRefund	The transaction type that is being requested		Only one transaction type is allowed per request.
amount	The total amount to be refunded	Up to 4 digits after the decimal point (no dollar symbol) Ex. 12.99 or 12.9999	This amount should include all other amounts such as tax amount, shipping amount, etc.
tax	Contains tax information for the refund Optional		
amount	The tax amount to be refunded Optional	Up to 4 digits after the decimal point (no dollar symbol) Ex. 12.99 or 12.9999	This amount must be included in the total amount for the transaction.
name	The name of the tax for the	Up to 31 characters	

Last revised: 7/15/2010

ELEMENT	VALUE	FORMAT	NOTES
	transaction Optional		
description	The tax description for the transaction Optional	Up to 255 characters	
shipping	Contains shipping information for the refund Optional		
amount	The shipping amount to be refunded Optional	Up to 4 digits after the decimal point (no dollar symbol) Ex. 12.99 or 12.9999	This amount must be included in the total amount for the transaction.
name	The name of the shipping for the transaction Optional	Up to 31 characters	
description	The shipping description for the transaction Optional	Up to 255 characters	
duty	Contains duty information for the refund Optional		
amount	The duty amount to be refunded Optional	Up to 4 digits after the decimal point (no dollar symbol) Ex. 12.99 or 12.9999	This amount must be included in the total amount for the transaction.
name	The name of the duty for the transaction Optional	Up to 31 characters	
description	The duty description for the transaction Optional	Up to 255 characters	

ELEMENT	VALUE	FORMAT	NOTES
lineItems	Contains line item details about the refund Optional		Up to 30 distinct instances of this element may be included per transaction to describe items included in the order.
itemId	The ID assigned to the item Optional	Up to 31 characters	
name	A short description of an item Optional	Up to 31 characters	
description	A detailed description of an item Optional	Up to 255 characters	
quantity	The quantity of an item Optional	Up to 4 digits (up to two decimal places)	
unitPrice	Cost of an item per unit <i>excluding</i> tax, freight, and duty Optional	Up to 4 digits with a decimal point (no dollar symbol) Ex. 4.95	
taxable	Indicates whether the item is subject to tax Optional	false true	
customerProfileId	Payment gateway assigned ID associated with the customer profile Conditional	Numeric	Required if the masked payment information is not being submitted. Must be submitted with customerPaymentProfileId. If a value is submitted for this field, it must be the same ID used for the original

  </merchantAuthentication>
  <customerProfileId>10000</customerProfileId>
  <customerPaymentProfileId>20000</customerPaymentProfileId>
</deleteCustomerPaymentProfileRequest>
```

Note: The sample code included in this document uses dummy field values. When using or testing sample code, be sure to enter valid field values. Additional sample code is available for download from the Authorize.Net Integration Center at <http://developer.authorize.net/samplecode>.

Input Elements for deleteCustomerShippingAddressRequest

This function is used to delete a customer shipping address from an existing customer profile.

The following table lists the input elements for executing an API call to the deleteCustomerShippingAddressRequest function.

ELEMENT	VALUE	FORMAT	NOTES
refId	Merchant-assigned reference ID for the request Optional	Up to 20 characters	If included in the request, this value will be included in the response. This feature might be especially useful for multi-threaded applications.
customerProfileId	Payment gateway assigned ID associated with the customer profile	Numeric	
customerAddressId	Payment gateway assigned ID associated with the customer shipping address	Numeric	

For information about output elements for this function, see the section of this document titled [“Output Elements for deleteCustomerShippingAddressResponse.”](#)

Example deleteCustomerShippingAddressRequest

```
<?xml version="1.0" encoding="utf-8"?>
<deleteCustomerShippingAddressRequest
xmlns="AnetApi/xml/v1/schema/AnetApiSchema.xsd">
  <merchantAuthentication>
    <name>YourUserLogin</name>
    <transactionKey>YourTranKey</transactionKey>
  </merchantAuthentication>
  <customerProfileId>10000</customerProfileId>
  <customerAddressId>30000</customerAddressId>
</deleteCustomerShippingAddressRequest>
```

Note: The sample code included in this document uses dummy field values. When using or testing sample code, be sure to enter valid field values. Additional sample code is available for download from the Authorize.Net Integration Center at <http://developer.authorize.net/samplecode>.

Input Elements for getCustomerProfileIdsRequest

This function is used to retrieve all existing customer profile Ids.

The following table lists the input elements for executing an API call to the getCustomerProfileIdRequest function.

ELEMENT	VALUE	FORMAT	NOTES
merchantAuthentication	Contains merchant unique information for purposes of authentication		
name	The valid API Login ID for the developer test or merchant account	Up to 25 characters	Submit the API Login ID used to submit transactions
transactionKey	The valid Transaction Key for the developer test or merchant account	16 characters	Submit the Transaction Key obtained from the Merchant Interface

For information about output elements for this function, see the section of this document titled [“Output Elements for getCustomerProfileIdsResponse.”](#)

Example getCustomerProfileIdsRequest

```
<?xml version="1.0" encoding="utf-8"?>
<getCustomerProfileIdsRequest
```

```
xmlns="AnetApi/xml/v1/schema/AnetApiSchema.xsd">
  <merchantAuthentication>
    <name>YourUserLogin</name>
    <transactionKey>YourTranKey</transactionKey>
  </merchantAuthentication>
</getCustomerProfileIdsRequest>
```

Note: The sample code included in this document uses dummy field values. When using or testing sample code, be sure to enter valid field values. Additional sample code is available for download from the Authorize.Net Integration Center at <http://developer.authorize.net/samplecode>.

Input Elements for getCustomerProfileRequest

This function is used to retrieve an existing customer profile along with all the associated customer payment profiles and customer shipping addresses.

The following table lists the input elements for executing an API call to the getCustomerProfileRequest function.

ELEMENT	VALUE	FORMAT	NOTES
customerProfileId	Payment gateway assigned ID associated with the customer profile	Numeric	

For information about output elements for this function, see the section of this document titled [“Output Elements for getCustomerProfileResponse.”](#)

Example getCustomerProfileRequest

```
<?xml version="1.0" encoding="utf-8"?>
<getCustomerProfileRequest
xmlns="AnetApi/xml/v1/schema/AnetApiSchema.xsd">
  <merchantAuthentication>
    <name>YourUserLogin</name>
    <transactionKey>YourTranKey</transactionKey>
  </merchantAuthentication>
  <customerProfileId>10000</customerProfileId>

<?xml version="1.0" encoding="utf-8"?>
<getCustomerPaymentProfileRequest
xmlns="AnetApi/xml/v1/schema/AnetApiSchema.xsd">
  <merchantAuthentication>
    <name>YourUserLogin</name>
    <transactionKey>YourTranKey</transactionKey>
  </merchantAuthentication>
  <customerProfileId>10000</customerProfileId>
  <customerPaymentProfileId>20000</customerPaymentProfileId>
</getCustomerPaymentProfileRequest>
```

Note: The sample code included in this document uses dummy field values. When using or testing sample code, be sure to enter valid field values. Additional sample code is available for download from the Authorize.Net Integration Center at <http://developer.authorize.net/samplecode>.

Input Elements for getCustomerShippingAddressRequest

This function is used to retrieve a customer shipping address for an existing customer profile.

The following table lists the input elements for executing an API call to the getCustomerShippingAddressRequest function.

ELEMENT	VALUE	FORMAT	NOTES
customerProfileId	Payment gateway assigned ID associated with the customer profile	Numeric	
customerAddressId	Payment gateway assigned ID associated with the customer shipping address	Numeric	

For information about output elements for this function, see the section of this document titled [“Output Elements for getCustomerShippingAddressResponse.”](#)

Example getCustomerShippingAddressRequest

```
<?xml version="1.0" encoding="utf-8"?>
<getCustomerShippingAddressRequest
xmlns="AnetApi/xml/v1/schema/AnetApiSchema.xsd">
  <merchantAuthentication>
    <name>YourUserLogin</name>
    <transactionKey>YourTranKey</transactionKey>
  </merchantAuthentication>
  <customerProfileId>10000</customerProfileId>
  <customerAddressId>30000</customerAddressId>
</getCustomerShippingAddressRequest>
```

Note: The sample code included in this document uses dummy field values. When using or testing sample code, be sure to enter valid field values. Additional sample code is available for download from the Authorize.Net Integration Center at <http://developer.authorize.net/samplecode>.

Input Elements for updateCustomerProfileRequest

This function is used to update an existing customer profile.

The following table lists the input elements for executing an API call to the updateCustomerProfileRequest function.

ELEMENT	VALUE	FORMAT	NOTES
refId	Merchant-assigned reference ID for the request Optional	Up to 20 characters	If included in the request, this value will be included in the response. This feature might be especially useful for multi-threaded

			applications.
profile	Contains payment information for the customer profile		
merchantCustomerId	Merchant assigned ID for the customer Optional	Up to 20 characters	
description	Description of the customer or customer profile Optional	Up to 255 characters	
email	Email address associated with the customer profile Optional	Up to 255 characters	
customerProfileId	Payment gateway assigned ID associated with the customer profile	Numeric	

For information about output elements for this function, see the section of this document titled [“Output Elements for updateCustomerProfileResponse.”](#)

Example updateCustomerProfileRequest

```
<?xml version="1.0" encoding="utf-8"?>
<updateCustomerProfileRequest
xmlns="AnetApi/xml/v1/schema/AnetApiSchema.xsd">
  <merchantAuthentication>
    <name>YourUserLogin</name>
    <transactionKey>YourTranKey</transactionKey>
  </merchantAuthentication>
  <profile>
    <merchantCustomerId>custId123</merchantCustomerId>
    <description>some description</description>
    <email>newaddress@example.com</email>
    <customerProfileId>10000</customerProfileId>
  </profile>
</updateCustomerProfileRequest>
```

Note: The sample code included in this document uses dummy field values. When using or testing sample code, be sure to enter valid field values. Additional sample code is available for download from the Authorize.Net Integration Center at <http://developer.authorize.net/samplecode>.

Input Elements for updateCustomerPaymentProfileRequest

This function is used to update a customer payment profile for an existing customer profile.

The following table lists the input elements for executing an API call to the updateCustomerPaymentProfileRequest function.

Note: If some elements in this request are not submitted or are submitted with a blank value, the values in the original profile are removed. As a best practice to prevent this from happening, before calling updateCustomerPaymentProfileRequest, call getCustomerPaymentProfileRequest. That function returns all current information including masked payment information. Then simply change the field that needs updating and use that XML to call updateCustomerPaymentProfileRequest.

ELEMENT	VALUE	FORMAT	NOTES
refId	Merchant-assigned reference ID for the request Optional	Up to 20 characters	If included in the request, this value will be included in the response. This feature might be especially useful for multi-threaded applications.
customerProfileId	Payment gateway assigned ID associated with the customer profile	Numeric	
paymentProfile	Contains payment information for the customer profile		Sensitive information that is not being updated can be masked.
customerType	Optional	individual business	If this field is not submitted in the request, or submitted with a blank value, the original value will be removed from the profile.
billTo			If this entire section is not submitted, the original billing information for the profile will stay the same. If updating only one or more elements under billTo, all elements

Last revised: 7/15/2010

ELEMENT	VALUE	FORMAT	NOTES
			must be submitted with their valid values to prevent the original values from being removed.
firstName	The customer's first name Optional	Up to 50 characters (no symbols)	If this field is not submitted in the request, or submitted with a blank value, the original value will be removed from the profile.
lastName	The customer's last name Optional	Up to 50 characters (no symbols)	If this field is not submitted in the request, or submitted with a blank value, the original value will be removed from the profile.
company	The name of the company associated with the customer, if applicable Optional	Up to 50 characters (no symbols)	If this field is not submitted in the request, or submitted with a blank value, the original value will be removed from the profile.
address	The customer's shipping address Optional	Up to 60 characters (no symbols)	If this field is not submitted in the request, or submitted with a blank value, the original value will be removed from the profile.
city	The city of the customer's shipping address Optional	Up to 40 characters (no symbols)	If this field is not submitted in the request, or submitted with a blank value, the original value will be removed from the profile.
state	The state of the customer's shipping address Optional	A valid two-character state code	If this field is not submitted in the request, or submitted with a blank value, the original value will be removed from the profile.
zip	The ZIP code of the customer's shipping	Up to 20 characters (no symbols)	If this field is not submitted in the request, or submitted

Last revised: 7/15/2010

ELEMENT	VALUE	FORMAT	NOTES
	address Optional		with a blank value, the original value will be removed from the profile.
country	The country of the customer's shipping address Optional	Up to 60 characters (no symbols)	If this field is not submitted in the request, or submitted with a blank value, the original value will be removed from the profile.
phoneNumber	The phone number associated with the customer's shipping address Optional	Up to 25 digits (no letters) Ex. (123)123-1234	If this field is not submitted in the request, or submitted with a blank value, the original value will be removed from the profile.
faxNumber	The fax number associated with the customer's shipping address Optional	Up to 25 digits (no letters) Ex. (123)123-1234	If this field is not submitted in the request, or submitted with a blank value, the original value will be removed from the profile.
payment	Contains payment information for the customer profile		Can contain creditCard or bankAccount
creditCard	Contains credit card payment information for the customer profile Conditional		This element is only required when the payment profile is credit card.
cardNumber	The customer's credit card number	13 to 16 digits Number can also be masked, ex. XXXX1111	If value is masked, the last four digits must match the original value in the profile. If a masked value is submitted, the original value will not be updated.
expirationDate	The expiration date for the customer's credit card	YYYY-MM Number can also be masked, ex. XXXX	If a masked value is submitted, the original value will not be updated.
cardCode	The three- or four-digit number on the	Numeric	This field is required if the merchant would

Last revised: 7/15/2010

ELEMENT	VALUE	FORMAT	NOTES
	back of a credit card (on the front for American Express) Optional		like to use the Card Code Verification (CCV) security feature. For more information, please see the <i>Merchant Integration Guide</i> at http://www.authorize.net/support/merchant/ . cardCode is only used for validation and will not be stored in the customer profile. It should only be used when submitting validationMode with a value of testMode or liveMode.
bankAccount	Contains bank account payment information for the customer profile Conditional		This element is only required when the payment profile is bank account.
accountType	The type of bank account for the payment profile Optional	checking savings businessChecking	If this field is not submitted in the request, or submitted with a blank value, the original value will be removed from the profile.
routingNumber	The routing number of the customer's bank	9 digits Number can also be masked, ex. XXXX1111	If value is masked, the last four digits must match the original value in the profile. If a masked value is submitted, the original value will not be updated.
accountNumber	The customer's bank account number	5 to 17 digits Number can also be masked, ex. XXXX1111	If value is masked, the last four digits must match the original value in the profile. If a masked value is submitted, the original value will not be updated.
nameOnAccount	The customer's full name as listed on	Up to 22 characters	If this field is not submitted in the request, or submitted

Last revised: 7/15/2010

ELEMENT	VALUE	FORMAT	NOTES
	the bank account		with a blank value, the original value will be removed from the profile.
echeckType	The type of electronic check transaction Optional	CCD PPD TEL WEB	Currently, the CIM API does not support ARC or BOC transaction types. If this field is not submitted in the request, or submitted with a blank value, the original value will be removed from the profile.
bankName	The name of the bank associated with the bank account number Optional	Up to 50 characters	If this field is not submitted in the request, or submitted with a blank value, the original value will be removed from the profile.
customerPaymentProfileId	Payment gateway assigned ID associated with the customer payment profile	Numeric	
validationMode	Indicates the processing mode for the request Optional	None testMode liveMode oldLiveMode	Validation mode allows you to generate a test transaction at the time you create a customer profile. In Test Mode , only field validation is performed. In Live Mode , a transaction is generated and submitted to the processor with the amount of \$0.01. If successful, the transaction is immediately voided. Visa transactions are being switched from \$0.01 to \$0.00 for all processors. All other credit card types use \$0.01. We recommend you consult your Merchant Account Provider

Last revised: 7/15/2010

ELEMENT	VALUE	FORMAT	NOTES
			<p>before switching to Zero Dollar Authorizations for Visa, because you may be subject to fees.</p> <p>For Visa transactions using \$0.00, the billTo address and billTo zip fields are required.</p> <p>We recommend that you do NOT use oldLiveMode. In oldLiveMode, \$0.01 is used for all credit card types, including Visa. The oldLiveMode option will be removed at a later date.</p> <p>When a value of "none" is submitted, no additional validation is performed.</p> <p>If a validation transaction is unsuccessful, the profile will not be updated and the merchant will receive an error.</p>

To test to see if the new payment information is valid, you can call `validateCustomerPaymentProfileRequest` after successfully updating the payment profile. See the section of this document titled “[Input Elements for validateCustomerPaymentProfileRequest](#)” for more information.

For information about output elements for this function, see the section of this document titled “[Output Elements for updateCustomerPaymentProfileResponse](#).”

Example updateCustomerPaymentProfileRequest

```
<?xml version="1.0" encoding="utf-8"?>
<updateCustomerPaymentProfileRequest
xmlns="AnetApi/xml/v1/schema/AnetApiSchema.xsd">
  <merchantAuthentication>
    <name>YourUserLogin</name>
    <transactionKey>YourTranKey</transactionKey>
  </merchantAuthentication>
```

Last revised: 7/15/2010

```

  <customerPaymentProfileId>20000</customerPaymentProfileId>
</paymentProfile>
</updateCustomerPaymentProfileRequest>

```

Note: The sample code included in this document uses dummy field values. When using or testing sample code, be sure to enter valid field values. Additional sample code is available for download from the Authorize.Net Integration Center at <http://developer.authorize.net/samplecode>.

Input Elements for updateCustomerShippingAddressRequest

This function is used to update a shipping address for an existing customer profile.

The following table lists the input elements for executing an API call to the updateCustomerShippingAddressRequest function.

ELEMENT	VALUE	FORMAT	NOTES
refId	Merchant-assigned reference ID for the request Optional	Up to 20 characters	If included in the request, this value will be included in the response. This feature might be especially

Last revised: 7/15/2010

ELEMENT	VALUE	FORMAT	NOTES
			useful for multi-threaded applications.
customerProfileId	Payment gateway assigned ID associated with the customer profile	Numeric	
address	Contains shipping address information for the customer profile		
firstName	The customer's first name Optional	Up to 50 characters (no symbols)	
lastName	The customer's last name Optional	Up to 50 characters (no symbols)	
company	The name of the company associated with the customer, if applicable Optional	Up to 50 characters (no symbols)	
address	The customer's shipping address Optional	Up to 60 characters (no symbols)	
city	The city of the customer's shipping address Optional	Up to 40 characters (no symbols)	
state	The state of the customer's shipping address Optional	A valid two-character state code	
zip	The ZIP code of the customer's shipping address Optional	Up to 20 characters (no symbols)	
country	The country of the customer's shipping address Optional	Up to 60 characters (no symbols)	

ELEMENT	VALUE	FORMAT	NOTES
phoneNumber	The phone number associated with the customer's shipping address Optional	Up to 25 digits (no letters) Ex. (123)123-1234	
faxNumber	The fax number associated with the customer's shipping address Optional	Up to 25 digits (no letters) Ex. (123)123-1234	
customerAddressId	Payment gateway assigned ID associated with the customer shipping address	Numeric

Input Elements for updateSplitTenderGroupRequest

This function is used to update the status of an existing order than contains multiple transactions with the same splitTenderId.

The following table lists the input elements for executing an API call to the updateSplitTenderGroupRequest function.

ELEMENT	VALUE	FORMAT	NOTES
splitTenderId	Payment gateway-assigned number associated with the order. Required	Numeric	
splitTenderStatus	Indicates the status of all transactions associated with the order.	voided or completed.	Use voided to void the entire order; use completed to indicate there are no further transactions in this order.

Example updateSplitTenderGroupRequest

```

<?xml version="1.0" encoding="utf-8"?>
<updateSplitTenderGroupRequest
xmlns="AnetApi/xml/v1/schema/AnetApiSchema.xsd">
  <merchantAuthentication>
    <name>YourUserLogin</name>
    <transactionKey>YourTranKey</transactionKey>
  </merchantAuthentication>
  <splitTenderId>123456</splitTenderId>
  <splitTenderStatus>voided</splitTenderStatus>
</updateSplitTenderGroupRequest>

```

Note: The sample code included in this document uses dummy field values. When using or testing sample code, be sure to enter valid field values. Additional sample code is available for download from the Authorize.Net Integration Center at <http://developer.authorize.net/samplecode>.

Input Elements for validateCustomerPaymentProfileRequest

This function is used to verify an existing customer payment profile by generating a test transaction. No customer receipt emails are sent when calling validateCustomerPaymentProfileRequest.

The following table lists the input elements for executing an API call to the validateCustomerPaymentProfileRequest function.

ELEMENT	VALUE	FORMAT	NOTES
customerProfileId	Payment gateway assigned ID associated with the customer profile	Numeric	
customerPaymentProfileId	Payment gateway assigned ID associated with the customer payment profile	Numeric	
customerShippingAddressId	Payment gateway assigned ID associated with the customer shipping address Optional	Numeric	If customerShippingAddressId is not passed, shipping information will not be included with the transaction.
cardCode	The three- or four-digit number on the back of a credit card (on the front for American Express) Optional	Numeric	This field is required if the merchant would like to use the Card Code Verification (CCV) security feature. For more information, please see the <i>Merchant Integration Guide</i> at http://www.authorize.net/suppor/merchant/ . cardCode is only used for validation and will not be stored in the customer profile. It should only be used when submitting validationMode with a value of testMode or liveMode.
validationMode	Indicates the processing mode for the request	testMode liveMode	Validation mode allows you to generate a test transaction in either Test Mode or Live Mode to check the validity of customer information. In Test Mode , only field validation is performed. In Live Mode , a transaction is generated and submitted to the processor with the amount of \$0.01. If successful, the transaction is immediately voided.. Visa transactions are being switched from \$0.01 to \$0.00 for all processors. All other credit card types use \$0.01. We recommend you consult your

Section 3

Responses

The response from the payment gateway to the API call is a set of fields that provides information about the status of the request.

The following table lists output for API calls.

ELEMENT	VALUE	FORMAT	NOTES
refId	Merchant-assigned reference ID for the request Optional	Up to 20 characters	If included in the request, this value will be included in the response. This feature might be especially useful for multi-threaded applications.
messages	Contains information about the results of the request		
resultCode	Contains additional information about the results of the request	Ok Error	
message	Contains the result code and text		Message provides more details about the error(s).
code	A code that represents the reason for the error	String	See the “ Response Codes ” section of this document for possible values.
text	A text description of the error	String	See the “ Response Codes ” section of this document for possible values.

CIM Responses

The sample below illustrates the structure of a typical response from the payment gateway for any of the CIM API calls.

Sample Response

```
<?xml version="1.0" encoding="utf-8" ?>
<createCustomerProfileResponse
xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
xmlns:xsd="http://www.w3.org/2001/XMLSchema"
  xmlns="AnetApi/xml/v1/schema/AnetApiSchema.xsd">
  <refId>refid1</refId>
  <messages>
    <resultCode>Ok</resultCode>
    <message>
      <code>I00001</code>
      <text>Successful.</text>
    </message>
  </messages>
  <customerProfileId>3187</customerProfileId>
</createCustomerProfileResponse>
```

Output for createCustomerProfileResponse

The following table lists the additional output returned from the payment gateway for an API call to the createCustomerProfileRequest function.

Note: The createCustomerProfileResponse only returns the assigned customerProfileId for the created profile. To retrieve the customerPaymentProfileId and the customerShippingId that may also be created when using the createCustomerProfileRequest function, you must submit the getCustomerProfileRequest function, using the assigned customerProfileId for that customer profile.

ELEMENT	VALUE	FORMAT	NOTES
refId	Merchant-assigned reference ID for the request Optional	Up to 20 characters	If included in the request, this value will be included in the response. This feature might be especially useful for multi-threaded applications.
customerProfileId	Payment gateway assigned ID associated with the customer profile	Numeric	This output is only present for successful requests.
customerPaymentProfileIdList	A list of all payment profile IDs created	Numeric	This output is only present for requests

Last revised: 7/15/2010

	with the request Optional		that contain one or more payment profiles. The payment profile IDs will be returned in the same order as they were in the request.
customerShippingAddressIdList	A list of all shipping profile IDs created with the request Optional	Numeric	This output is only present for requests that contain multiple shipping profiles. The shipping profile IDs will be returned in the same order as they were in the request.
validationDirectResponseList	A list of the direct response results for the validation transaction for each payment profile. Optional	String See the <i>Advanced Integration Guide</i> at http://www.authorize.net/support/AIM_guide.pdf for details about information included in the payment gateway transaction response.	This output is only present if the ValidationMode input element is passed with a value of testMode or liveMode. The list will be returned in the same order as the payment profiles were submitted in the request.

Sample Successful createCustomerProfileResponse

```
<?xml version="1.0" encoding="utf-8"?>
<createCustomerProfileResponse
xmlns="AnetApi/xml/v1/schema/AnetApiSchema.xsd">
  <messages>
    <resultCode>Ok</resultCode>

</createCustomerPaymentProfileResponse>
```

Output for createCustomerShippingAddressResponse

The following table represents the additional output returned from the payment gateway for an API call to the createCustomerShippingAddressRequest function.

ELEMENT	VALUE	FORMAT	NOTES
refId	Merchant-assigned reference ID for the request Optional	Up to 20 characters	If included in the request, this value will be included in the response. This feature might be especially useful for multi-threaded applications.
customerAddressId	Payment gateway assigned ID associated with the customer shipping address	Numeric	This output is only present for successful requests.

Sample createCustomerShippingAddressResponse

```
<?xml version="1.0" encoding="utf-8"?>  
<createCustomerShippingAddressResponse  
  xmlns="AnetApi/xml/v1/schema/AnetApiSchema.xsd">  
  <messages>  
    <resultCode>Ok</resultCode>  
    <message>  
      <code>I00001</code>  
      <text>Successful.</text>  
    </message>  
  </messages>  
  <customerAddressId>30000</customerAddressId>  
</createCustomerShippingAddressResponse>
```

Output for createCustomerProfileTransactionResponse

The following table represents the additional output returned from the payment gateway for an API call to the createCustomerProfileTransactionRequest function.

ELEMENT	VALUE	FORMAT	NOTES
refId	Merchant-assigned reference ID for the request Optional	Up to 20 characters	If included in the request, this value will be included in the response. This feature might be especially useful for multi-threaded applications.
directResponse	Contains detailed information about the result of the transaction.	String See the <i>Advanced Integration Guide</i> at http://www.authorize.net/support/AIM_guide.pdf for details about information included in the payment gateway transaction response.	Transactions created from a customer profile will behave the same as regular transactions - you and your customer will receive all associated email notifications. Additionally, all fraud settings, including FDS filters and AVS and CCV settings, will be enforced.

Sample createCustomerProfileTransactionResponse

```
<?xml version="1.0" encoding="utf-8"?>
<createCustomerProfileTransactionResponse
xmlns="AnetApi/xml/v1/schema/AnetApiSchema.xsd">
  <messages>
    <resultCode>Ok</resultCode>
    <message>

  </directResponse>
</createCustomerProfileTransactionResponse>
```

Output for deleteCustomerProfileResponse

The following table lists the additional output returned from the payment gateway for an API call to the deleteCustomerProfileRequest function.

ELEMENT	VALUE	FORMAT	NOTES
refId	Merchant-assigned reference ID for the request Optional	Up to 20 characters	If included in the request, this value will be included in the response. This feature might be especially useful for multi-threaded applications.

Sample deleteCustomerProfileResponse

```
<?xml version="1.0" encoding="utf-8"?>
<deleteCustomerProfileResponse
xmlns="AnetApi/xml/v1/schema/AnetApiSchema.xsd">
  <messages>
    <resultCode>Ok</resultCode>
    <message>
      <code>I00001</code>
      <text>Successful.</text>
    </message>
  </messages>
</deleteCustomerProfileResponse>
```

Output for deleteCustomerPaymentProfileResponse

The following table lists the additional output returned from the payment gateway for an API call to the deleteCustomerPaymentProfileRequest function.

ELEMENT	VALUE	FORMAT	NOTES
refId	Merchant-assigned reference ID for the request Optional	Up to 20 characters	If included in the request, this value will be included in the response. This feature might be especially useful for multi-threaded applications.

Sample deleteCustomerPaymentProfileResponse

```
<?xml version="1.0" encoding="utf-8"?>
<deleteCustomerPaymentProfileResponse
xmlns="AnetApi/xml/v1/schema/AnetApiSchema.xsd">
  <messages>
    <resultCode>Ok</resultCode>
    <message>
      <code>I00001</code>
      <text>Successful.</text>
    </message>
  </messages>
</deleteCustomerPaymentProfileResponse>
```

Output for deleteCustomerShippingAddressResponse

The following table lists the additional output returned from the payment gateway for an API call to the deleteCustomerShippingAddressRequest function.

ELEMENT	VALUE	FORMAT	NOTES
refId	Merchant- assigned reference ID for the request Optional	Up to 20 characters	If included in the request, this value will be included in the response. This feature might be especially useful for multi- threaded applications.

Sample deleteCustomerShippingAddressResponse

```
<?xml version="1.0" encoding="utf-8"?>
<deleteCustomerShippingAddressResponse
xmlns="AnetApi/xml/v1/schema/AnetApiSchema.xsd">
  <messages>
    <resultCode>Ok</resultCode>
    <message>
      <code>I00001</code>
      <text>Successful.</text>
    </message>
  </messages>
</deleteCustomerShippingAddressResponse>
```

Output for getCustomerProfileIdsResponse

The following table lists the additional output returned from the payment gateway for an API call to the getCustomerProfileIdsRequest function.

ELEMENT	VALUE	FORMAT	NOTES
refId	Merchant-assigned reference ID for the request Optional	Up to 20 characters	If included in the request, this value will be included in the response. This feature might be especially useful for multi-threaded applications.
ids	Payment gateway assigned IDs associated with the customer profiles	Numeric	This output is only present for successful requests.

Sample Successful getCustomerProfileIdsResponse

```
<?xml version="1.0" encoding="utf-8"?>
<getCustomerProfileIdsResponse
xmlns="AnetApi/xml/v1/schema/AnetApiSchema.xsd">
  <messages>
    <resultCode>Ok</resultCode>

      <code>I00001</code>
      <text>Successful.</text>
    </message>
  </messages>
  <ids>
    <numericString>10000</numericString>
    <numericString>10001</numericString>
    <numericString>10002</numericString>
  </ids>
</getCustomerProfileIdsResponse>
```

Output for getCustomerProfileResponse

The following table lists the additional output returned from the payment gateway for an API call to the getCustomerProfileRequest function.

ELEMENT	VALUE	FORMAT	NOTES
profile	Contains information for the customer profile		
customerProfileId	Payment gateway assigned ID associated with the customer profile	Numeric	This output is only present for successful requests.
merchantCustomerId	Merchant assigned ID for the customer Optional	Up to 20 characters	
description	Description of the customer or customer profile Optional	Up to 255 characters	
email	Email address associated with the customer profile Optional	Up to 255 characters	
paymentProfiles	Contains payment profiles for the customer profile		
customerPaymentProfileId	Payment gateway assigned ID associated with the customer payment profile	Numeric	
payment	Contains payment profile information for the customer		

ELEMENT	VALUE	FORMAT	NOTES
	profile		
creditCard	Contains credit card payment information for the customer profile		
cardNumber	The customer's credit card number	13 to 16 digits	All sensitive payment information in the output is masked.
expirationDate	The expiration date for the customer's credit card	YYYY-MM	All sensitive payment information in the output is masked.
bankAccount	Contains bank account payment information for the customer profile		
routingNumber	The routing number of the customer's bank	9 digits	All sensitive payment information in the output is masked.
accountNumber	The customer's bank account number	5 to 17 digits	All sensitive payment information in the output is masked.
driversLicense	Contains the customer's driver's license information		This field is no longer supported in CIM requests and is only returned for profiles that were created under the SecureSource product.
state	The state of the customer's driver's license	A valid two-character state code	This field is no longer supported in CIM requests and is only returned for profiles that were created under the SecureSource product.

ELEMENT	VALUE	FORMAT	NOTES
number	The customer's driver's license number	5 to 20 characters	This field is no longer supported in CIM requests and is only returned for profiles that were created under the SecureSource product. All sensitive payment information in the output is masked.
dateOfBirth	The date of birth listed on the customer's driver's license	YYYY-MM-DD	This field is no longer supported in CIM requests and is only returned for profiles that were created under the SecureSource product. All sensitive payment information in the output is masked.
taxId	The customer's Social Security Number or tax ID	9 digits	This field is no longer supported in CIM requests and is only returned for profiles that were created under the SecureSource product. All sensitive payment information in the output is masked.
shipToList	Contains shipping address profile information for the customer profile		
customerShippingAddressId	Payment gateway assigned ID associated with the customer shipping	Numeric	

Last revised: 7/15/2010

ELEMENT	VALUE	FORMAT	NOTES
	address		
firstName	The customer's first name Optional	Up to 50 characters (no symbols)	
lastName	The customer's last name Optional	Up to 50 characters (no symbols)	
company	The name of the company associated with the customer, if applicable Optional	Up to 50 characters (no symbols)	
address	The customer's shipping address Optional	Up to 60 characters (no symbols)	
city	The city of the customer's shipping address Optional	Up to 40 characters (no symbols)	
state	The state of the customer's shipping address Optional	A valid two-character state code	
zip	The ZIP code of the customer's shipping address Optional	Up to 20 characters (no symbols)	
country	The country of the customer's shipping address Optional	Up to 60 characters (no symbols)	

ELEMENT	VALUE	FORMAT	NOTES
phoneNumber	The phone number associated with the customer's shipping address Optional	Up to 25 digits (no letters) Ex. (123)123-1234	
faxNumber	The fax number associated with the customer's shipping address Optional	Up to 25 digits (no letters) Ex. (123)123-1234

Output for getCustomerPaymentProfileResponse

The following table lists the additional output returned from the payment gateway for an API call to the getCustomerPaymentProfileRequest function.

ELEMENT	VALUE	FORMAT	NOTES
paymentProfile	Contains payment information for the customer profile		
customerPaymentProfileId	Payment gateway assigned ID associated with the customer payment profile	Numeric	
customerType		individual business	
billTo			
firstName	The customer's first name	Up to 50 characters (no symbols)	
lastName	The customer's last name	Up to 50 characters (no symbols)	
company	The name of the company associated with the customer, if applicable	Up to 50 characters (no symbols)	

Last revised: 7/15/2010

ELEMENT	VALUE	FORMAT	NOTES
address	The customer's address	Up to 60 characters (no symbols)	
city	The city of the customer's address	Up to 40 characters (no symbols)	
state	The state of the customer's address	A valid two-character state code	
zip	The ZIP code of the customer's address	Up to 20 characters (no symbols)	
country	The country of the customer's address	Up to 60 characters (no symbols)	
phoneNumber	The phone number associated with the customer's address	Up to 25 digits (no letters) Ex. (123)123-1234	
faxNumber	The fax number associated with the customer's address	Up to 25 digits (no letters) Ex. (123)123-1234	
payment	Contains payment profile information for the customer profile		
creditCard	Contains credit card payment information for the payment profile		
cardNumber	The customer's credit card number	13 to 16 digits	All sensitive payment information in the output is masked.
expirationDate	The expiration date for the customer's credit card	YYYY-MM	All sensitive payment information in the output is masked.
bankAccount	Contains bank account payment information for the payment profile		

ELEMENT	VALUE	FORMAT	NOTES
accountType	The type of bank account for the payment profile	checking savings businessChecking	
routingNumber	The routing number of the customer's bank	9 digits	All sensitive payment information in the output is masked.
accountNumber	The customer's bank account number	5 to 17 digits	All sensitive payment information in the output is masked.
nameOnAccount	The customer's full name as listed on the bank account	Up to 22 characters	
echeckType	The type of electronic check transaction	CCD PPD TEL WEB	Currently, the CIM API does not support ARC or BOC transaction types.
bankName	The name of the bank associated with the bank account number	Up to 50 characters	
driversLicense	Contains the customer's driver's license information		This field is no longer supported in CIM requests and is only returned for profiles that were created under the SecureSource product.
state	The state of the customer's driver's license	A valid two-character state code	This field is no longer supported in CIM requests and is only returned for profiles that were created under the SecureSource product.
number	The customer's driver's license number	Between 5 and 20 characters	This field is no longer supported in CIM requests and is only

Last revised: 7/15/2010

ELEMENT	VALUE	FORMAT	NOTES
			<p>returned for profiles that were created under the SecureSource product.</p> <p>All sensitive payment information in the output is masked.</p>
dateOfBirth	The date of birth listed on the customer's driver's license	YYYY-MM-DD	<p>This field is no longer supported in CIM requests and is only returned for profiles that were created under the SecureSource product.</p> <p>All sensitive payment information in the output is masked.</p>
taxId	The customer's Social Security Number or tax ID	9 digits	<p>This field is no longer supported in CIM requests and is only returned for profiles that were created under the SecureSource product.</p> <p>All sensitive payment information in the output is masked.</p>

Sample getCustomerPaymentProfileResponse

```

</getCustomerPaymentProfileResponse>

```

Output for getCustomerShippingAddressResponse

The following table lists the additional output returned from the payment gateway for an API call to the getCustomerShippingAddressRequest function.

ELEMENT	VALUE	FORMAT	NOTES
address	Contains shipping address information for the customer profile		
customerShippingAddressId	Payment gateway assigned ID associated with the customer shipping address	Numeric	

ELEMENT	VALUE	FORMAT	NOTES
firstName	The customer's first name Optional	Up to 50 characters (no symbols)	
lastName	The customer's last name Optional	Up to 50 characters (no symbols)	
company	The name of the company associated with the customer, if applicable Optional	Up to 50 characters (no symbols)	
address	The customer's shipping address Optional	Up to 60 characters (no symbols)	
city	The city of the customer's shipping address Optional	Up to 40 characters (no symbols)	
state	The state of the customer's shipping address Optional	A valid two-character state code	
zip	The ZIP code of the customer's shipping address Optional	Up to 20 characters (no symbols)	
country	The country of the customer's shipping address Optional	Up to 60 characters (no symbols)	
phoneNumber	The phone number associated with the customer's shipping address Optional	Up to 25 digits (no letters) Ex. (123)123-1234	
faxNumber	The fax number associated with the customer's shipping address Optional	Up to 25 digits (no letters) Ex. (123)123-1234	

Last revised: 7/15/2010

Sample getCustomerShippingAddressResponse

```
<?xml version="1.0" encoding="utf-8"?>
<getCustomerShippingAddressResponse
xmlns="AnetApi/xml/v1/schema/AnetApiSchema.xsd">
  <messages>
    <resultCode>Ok</resultCode>
    <message>
      <code>I00001</code>
      <text>Successful.</text>
    </message>

    <customerShippingAddressId>30000</customerShippingAddressId>
  </address>
</getCustomerShippingAddressResponse>
```

Output for updateCustomerProfileResponse

The following table lists the additional output returned from the payment gateway for an API call to the updateCustomerProfileRequest function.

ELEMENT	VALUE	FORMAT	NOTES
refId	Merchant-assigned reference ID for the request Optional	Up to 20 characters	If included in the request, this value will be included in the response. This feature might be especially useful for multi-threaded applications.

Last revised: 7/15/2010

Sample updateCustomerProfileResponse

```
<?xml version="1.0" encoding="utf-8"?>
<updateCustomerProfileResponse
xmlns="AnetApi/xml/v1/schema/AnetApiSchema.xsd">
  <messages>
    <resultCode>Ok</resultCode>
    <message>
      <code>I00001</code>
      <text>Successful.</text>
    </message>
  </messages>
</updateCustomerProfileResponse>
```

Output for updateCustomerPaymentProfileResponse

The following table lists the additional output returned from the payment gateway for an API call to the updateCustomerPaymentProfileRequest function.

ELEMENT	VALUE	FORMAT	NOTES
refId	Merchant-assigned reference ID for the request Optional	Up to 20 characters	If included in the request, this value will be included in the response. This feature might be especially useful for multi-threaded applications.
validationDirectResponse	Contains detailed information about the result of the transaction. Optional	String	This output is only present if the ValidationMode input element is passed with a value of testMode or liveMode. See the <i>Advanced Integration Guide</i> at http://www.authorize.net/support/AIM_guide.pdf for details about information included in the payment gateway transaction response.

Sample updateCustomerPaymentProfileResponse

```
<?xml version="1.0" encoding="utf-8"?>
<updateCustomerPaymentProfileResponse
xmlns="AnetApi/xml/v1/schema/AnetApiSchema.xsd">
  <messages>
    <resultCode>Ok</resultCode>
    <message>
      <code>I00001</code>
      <text>Successful.</text>
    </message>
  </messages>
</updateCustomerPaymentProfileResponse>
```

Output for updateCustomerShippingAddressResponse

The following table lists the additional output returned from the payment gateway for an API call to the updateCustomerShippingAddressRequest function.

ELEMENT	VALUE	FORMAT	NOTES
refId	Merchant- assigned reference ID for the request Optional	Up to 20 characters	If included in the request, this value will be included in the response. This feature might be especially useful for multi-threaded applications.

Sample updateCustomerShippingAddressResponse

```
<?xml version="1.0" encoding="utf-8"?>
<updateCustomerShippingAddressResponse
xmlns="AnetApi/xml/v1/schema/AnetApiSchema.xsd">
  <messages>
    <resultCode>Ok</resultCode>
    <message>
      <code>I00001</code>
      <text>Successful.</text>
    </message>
  </messages>
```

```
</updateCustomerShippingAddressResponse>
```

Output for updateSplitTenderGroupResponse

The following example shows output returned from the payment gateway for an API call to the updateSplitTenderGroupRequest function.

```
<?xml version="1.0" encoding="utf-8"?>
<updateSplitTenderGroupResponse
xmlns="AnetApi/xml/v1/schema/AnetApiSchema.xsd">
  <messages>
    <resultCode>Ok</resultCode>
    <message>
      <code>I00001</code>
      <text>Successful.</text>
    </message>
  </messages>
</updateSplitTenderGroupResponse>
```

Output for validateCustomerPaymentProfileResponse

The following table represents the additional output returned from the payment gateway for an API call to the validateCustomerPaymentProfileRequest function.

ELEMENT	VALUE	FORMAT	NOTES
directResponse	Contains detailed information about the result of the transaction.	String	See the <i>Advanced Integration Guide</i> at http://www.authorize.net/support/AIM_guide.pdf for details about information included in the payment gateway transaction response.

Sample validateCustomerPaymentProfileResponse

```
<?xml version="1.0" encoding="utf-8"?>
<validateCustomerPaymentProfileResponse
xmlns="AnetApi/xml/v1/schema/AnetApiSchema.xsd">

</validateCustomerPaymentProfileResponse>

```

Duplicate Profile Verification

When submitting calls to the `createCustomerProfileRequest`, `createCustomerPaymentProfileRequest`, and `createCustomerShippingAddressRequest` functions, the payment gateway checks certain fields in each request to determine that a profile with that same information does not already exist. If a profile already exists that contains the values being submitted in the new request, then the payment gateway returns an error message. If the duplicate profile is a customer profile, then the error message contains the ID of the already-created profile. The duplicate profile verification serves as a safeguard against accidental duplicate submissions.

The following table lists the fields for each function that cannot match any other profile already created. An error will only occur if ALL the values for each field being submitted match ALL the values for each field in the already existing profile.

FUNCTION	FIELDS USED FOR DUPLICATE PROFILE VERIFICATION
<code>createCustomerProfileRequest</code>	merchantCustomerId, description, email
<code>createCustomerPaymentProfileRequest</code>	customerProfileId, cardNumber, accountNumber, routingNumber, billToFirstName, billToLastName, billToAddress, and billToZip
<code>createCustomerShippingAddressRequest</code>	customerProfileId, firstName, lastName, address, zip and phoneNumber

Response Codes

The following table lists the common response codes and texts for requests to the Customer Information Manager API.

CODE	TEXT	DESCRIPTION
I00001	Successful	The request was processed successfully.
I00003	The record has already been deleted.	The record has already been deleted.
E00001	An error occurred during processing. Please try again.	An unexpected system error occurred while processing this request.
E00002	The content-type specified is not supported.	The only supported content-types are text/xml and application/xml.
E00003	An error occurred while parsing the XML request.	This is the result of an XML parser error.
E00004	The name of the requested API method is invalid.	The name of the root node of the XML request is the API method being called. It is not valid.
E00005	The merchantAuthentication.transactionKey is invalid or not present.	Merchant authentication requires a valid value for transaction key.
E00006	The merchantAuthentication.name is invalid or not present.	Merchant authentication requires a valid value for name.
E00007	User authentication failed due to invalid authentication values.	The name/and or transaction key is invalid.
E00008	User authentication failed. The payment gateway account or user is inactive.	The payment gateway or user account is not currently active.
E00009	The payment gateway account is in Test Mode. The request cannot be processed.	The requested API method cannot be executed while the payment gateway account is in Test Mode.
E00010	User authentication failed. You do not have the appropriate permissions.	The user does not have permission to call the API.
E00011	Access denied. You do not have the appropriate permissions.	The user does not have permission to call the API method.
E00013	The field is invalid.	One of the field values is not valid.
E00014	A required field is not present.	One of the required fields was not present.
E00015	The field length is invalid.	One of the fields has an invalid length.
E00016	The field type is invalid.	The field type is not valid.
E00019	The customer taxId or driversLicense information is required.	The customer tax ID or driver's license information (driver's license number, driver's license state, driver's license DOB) is required for the subscription.
E00027	The transaction was unsuccessful.	An approval was not returned for the

Last revised: 7/15/2010

CODE	TEXT	DESCRIPTION
		transaction.
E00029	Payment information is required.	Payment information is required when creating a subscription or payment profile.
E00039	A duplicate record already exists.	A duplicate of the customer profile, customer payment profile, or customer address was already submitted.
E00040	The record cannot be found.	The profileID, paymentProfileId, or shippingAddressId for this request is not valid for this merchant.
E00041	One or more fields must contain a value.	All of the fields were empty or missing.
E00042	The maximum number of payment profiles allowed for the customer profile is {0}.	The maximum number of payment profiles for the customer profile has been reached.
E00043	The maximum number of shipping addresses allowed for the customer profile is {0}.	The maximum number of shipping addresses for the customer profile has been reached.
E00044	Customer Information Manager is not enabled.	The payment gateway account is not enabled for Customer Information Manager (CIM).
E00045	The root node does not reference a valid XML namespace.	An error exists in the XML namespace. This error is similar to E00003.
E00051	The original transaction was not issued for this payment profile.	If the customer profile ID, payment profile ID, and shipping address ID are included, they must match the original transaction.
